

NEW PRODUCT RELEASES

Tuesday 25th November 2008 (Perth, Australia): WebSpy (ASX: WSY) today announced the new version release of the award winning Vantage product range, **Vantage 2.1**, the release of the brand new software solution, **Vantage Ultimate**, and launch of redesigned www.webspy.com.

Vantage 2.1 takes monitoring and reporting to the next level and enables organizations to monitor, not only Internet usage and web browsing behavior, but also; email usage, instant messaging, event logs, routers, incoming visitor traffic, firewalls, antivirus and spam applications. Vantage 2.1 is able to analyze over [200 types of log files](#) from different vendors while the majority of competing log file analyzers are hard-coded to analyze a particular log file type.

WebSpy COO, Lagis Zavros, says, "Vantage 2.1 is the result of combining an innovative development team, market sensitivity and client collaboration. We work closely with our clients to ensure their needs and expectations are constantly met – and often exceeded. Vantage 2.1 is a solution far superior to anything else in the market place."

Vantage Ultimate is WebSpy's latest software solution that incorporates all innovative Vantage 2.1 features as well as being able to satisfy the surging organizational need of **distributing information - securely and responsibly.**

Vantage Ultimate ascertains a company's organizational structure and enables secure, web-based, access to reports at any chosen level to ensure that the protection of resources is not just the responsibility of the security team, but potentially the entire organization. Its on-demand capabilities can enable even individual employees to conduct their own ad-hoc analysis to view their productive and non-productive activity, thus helping to drive responsible behavior.

Most competing log analysis solutions, trying to address the same issues, lack any protection of employee privacy. They provide open or shut access, meaning that anyone with access to their solution can view anyone else's activity.

WebSpy COO, Lagis Zavros, commented that, "The beta version of Vantage Ultimate was very well received and the interest in the software from organizations around the world has been astonishing. We are seeing a trend where organizations are recognizing that issues relating to inside threats need a two pronged attack – protection of their business through reliable security systems and education of the workforce to drive responsible behavior."

In addition to innovative product releases, WebSpy itself has undergone a recent transformation after redesigning both www.webspy.com and the WebSpy logo.
