

EMAIL MONITORING

11 August 2002

WebSpy has released an email and Internet monitoring and management tool called Email Analyzer 1.0 that had advanced reporting tools and functionality in support of email log formats such as GroupWise, Exchange, MDAemon and SendMail.

Email Analyzer 1.0 complies with Australian Privacy Laws and enables companies to create comprehensive reports based on the email sent and received to and from an organization. It is a highly configurable prodata form proxy server or mail server log files. Email Analyzer can find specific data within summaries and display it in charts and tables. It can be installed on any computer running Windows 95 or above.
