

February 2003

ISpy from the boffins at WebSpy is an Internet access monitor that analyses your PC's temporary Internet Files and gives you a full report of exactly where people have been online and what they've been looking at. If more than one person uses the PC, this is useful for making sure that nothing untoward goes on in your absence.

Location: \internet\Ispy.exe

File size: 1,530kb
